Virtual	N/A	Building an equitable framework for Direct Air Capture deployment in emerging economies	Streamed during COP - link is TBC	DAC Coalition	
8 novembre 2022	15:00-16:30	How certification can unlock the carbon removal opportunity in Africa?	IETA pavillion	CCapsule	To date, Africa has contributed the least to climate change, but could be a climate vanguard in the race to net zero. The continent is an unlikely destination for Carbon Removal but could prove an ideal host for negative emission technologies. This session will explore why C-Capsule has chosen Africa to pilot its carbon removal registry, discussing the key role of certification plays in scaling high-quality CDR.
8 novembre 2022	16:45-17:45	The GLOBE COP27 Legislators Summit	Sheraton Hotel - Cairo	UNFCCC; UNDRR; CBD	
9 novembre 2022	1000 - 1100	NABA: A new paradigm for Climate action in Africa	Bellona Pavillion Blue Zone	Norwegian Africa Business Association	The prevailing narrative about Africa positions the continent as a victim of circumstance - facing the most severe impact from climate change, despite being the world's lowest emitter. Lacking the financial resources to drive adaptation and mitigation, African economies are essentially reliant on global support and action to tackle the climate challenge. This narrative is also contributing to the notion that the region cannot industrialize and develop without a heavy reliance on fossil fuel extraction. This is a seductive, but dangerous narrative that risks reinforcing the continent's marginal role in the global shift towards sustainability, and locking it into a growth path that actually undermines long-term economic development. A paradigm shift is needed that emphasizes Africa's agency in driving sustainability, and establishes a path to industrial development built around climate action.
9 novembre 2022	1500 - 1630	Keeping 1.5 oC alive: opportunities & challenges for CO2 removal and storage in the Global South	Tutankhamun room in the Blue Zone	CO2GeoNet	CO2 removal and geological storage are a key part of achieving net zero/negative targets and critical to manage overshoot. While scaling CDR brings challenges & opportunities for sustainable growth, developing countries could offer efficient large-scale deployment, driving growth & job creation.
9 novembre 2022	1600 - 1700	Delivering finance for breakthrough climate innovations	Business Pavilion (Blue Zone); livestream https://vimeo.com/event/2552799	We Mean Business Coalition	A panel session discussing the opportunities that climate technology investment can unlock, with leading voices from across business, policy, investment, and innovation. The session will also focus on the key challenges ahead when scaling up funding and the opportunities for co-benefits in this pivotal decade of action. This event will serve as the launch event for the third edition of the State of Climate Tech, an annual PwC report on the climate tech innovation ecosystem, drawing on investment trends, impact analysis, expert views, and insights into drivers and barriers.
10 novembre 2022	10-10:30 (TBC)	CDR in Kenya	TBC	DAC Coalition	Fireside chat including DACCS players in Kenya
11 novembre 2022	12:30 - 14:00	Carbon and Biodiversity credits in Africa Futures Lab	Climate Action Zone, Room 1	UNFCCC + CIFF	This Futures Lab aims to develop a common understanding of carbon and biodiversity credits, emerging innovations, and how earnings from Africa's intact and managed ecosystems could finance green development and livelihoods in Africa.
11 novembre 2022	17:00-18:30	Futures lab at cop27. Carbon removals: pioneers in the global south	Ibis Room (Climate Action Zone Room 1	Climate Champion Team	A diverse, dynamic and vibrant carbon removals ecosystem is emerging across the Global South, leveraging new technologies and approaches to accelerate the transition to clean growth, build needed infrastructure and create jobs. What will it take to scale up these efforts?
11 novembre 2022	17.30 to 18.30	The crucial role of a Mediterranean partnership - Reaching net zero in the Mediterranean with CO2 capture and storage	Mediterranean pavilion	CO2GeoNet	There is a growing interest from Mediterranean countries that is bringing CO2 Capture and Storage (CCS) onto national agendas to help meet climate targets. New initiatives are developing, adapted to the geology, transport systems and CO2 producers in this region. The CO2 storage potential of the Mediterranean region (both offshore and onshore) and the possibility to activate cross border collaboration amongst the more industrialised countries of southern Europe support this growing momentum.
12 novembre 2022	1200 to 1330	Implementation lab - Exponential Action: Scaling Regenerative Approaches Through Place-Based Implementation	Lotus room, Area B, Room 21: Climate Action Zone (situated in the Blue Zone of the COP27 compound in Sharm el Sheikh)	UNFCCC's Marrakesh Partnership for Global Climate Action and the UN Climate Change High Level champions	There is growing interest in the potential of regenerative approaches (e.g. agroecology, regenerative agriculture, agroforestry) for helping reduce GHG emissions from the land-use sector. At the global scale, considerable evidence suggests that regenerative practices, when combined with dietary shifts and reduced food loss and waste, can feed a growing population while keeping warming to 1.5°C. Less attention has been paid to how these actions play out at the national level. In this implementation lab we use a food systems lens to explore strategies that may prove more effective in certain countries for scaling regenerative approaches, while also highlighting challenges or trade-offs that may be encountered.
14 novembre 2022	13:30-14:00 (EET)	Carbon Markets and Their Role for Biodiversity - Stepping Up Climate & Biodiversity Action by Trading CO2"	Park Regency - outside COP zones	World Biodiversity Summit	Carbon markets play a crucial role in fighting climate change and can fast-track the transition to a net-zero economy. To better synergise the global climate and biodiversity goals, carbon markets should not only focus on mitigating climate change, but projects should also consider their effects on biological diversity. This fireside chat will look at the business cases and policy frameworks needed to achieve nature-positive carbon markets.
14 novembre 2022	430 - 6 PM	COP27 Virtual Event - CO2 Transport Networks (South Pole / CATF)	Virtual - recorded at this time but screened later	SouthPole	One of the largest issues in scaling the carbon removal industry is the missing transport infrastructure. Insecurity on the investment side reigns as the options do not complement each other: if local storage sites are established, there is no need to invest into transport. If pipelines are planned, there is limited incentive to invest into traditional infrastructure (rail, sea). To make decisions, it needs an internationally coordinated common understanding of the different infrastructure needs.
16 novembre 2022	3-5 pm; followed by a reception from 7-8 pm	Africa-China Climate Dialogue	Novotel Sharm El Sheikh Hotel in Egypt	Children's Investment Fund Foundation, Sequoia Climate Foundation, Oak Foundation and BRI Green Development Coalition (BRIGC)	Event focused on upscaling renewable energy access in Africa and exploring multiple pathways China could contribute to the process.
